

# FLEXIBLE, FAST DENSIFICATION SOLUTIONS

**The race to 5G is on.** Now is the time to densify wireless networks, and speed to market and network scalability are top priorities. Eco-Site provides flexible, scalable densification solutions like small cells and mini-macros, available through a simplified process designed to get you on air fast.

## NEED FOR SPEED

We took the logistical hurdles out of the densification equation so you can go from search ring to deployment faster than ever. Our master lease agreements with corporate-owned entities eliminate the need for individual site documentation and pricing negotiations, and utilize existing structures to avoid construction delays.

## MORE FLEXIBILITY, BETTER SCALABILITY

Eco-Site's retail locations allow for a variety of antenna placement options like poles, canopies and rooftops to accommodate mini-macro and traditional small cell installations. The sites offer more physical space, enabling carriers to easily add, maintain and update infrastructure as network needs evolve.

## WE KEEP IT SIMPLE

Draw from over 20,000 retail locations to attack national and regional network challenges with multiple installations at once, leveraging the traffic analyses retail stores use to pick locations. Take advantage of a single point of contact across sites and projects for simple coordination and a consistent approach.

Get started with our Site Locator. Visit [sitelocator.eco-site.com](https://sitelocator.eco-site.com) to search through thousands of available locations.

### ECO-SITE FAST FACTS
